SUPERIOR COURT OF THE STATE OF WASHINGTON
FOR SPOKANE COUNTY

MARCO BARBANTI, individually and
on behalf of a class of all others similarly
situated,

Plaintiffs,

v.

W.R. GRACE & COMPANY-CONN (a
Connecticut corporation); W.R. GRACE &
COMPANY (a Delaware corporation);
W.R. GRACE & CO., aka GRACE, an
association of business entities; SEALED
AIR CORPORATION (a Delaware
corporation); and WILLIAM V. CULVER,
a resident of the state of Washington,

Defendants.

NO. 00201756-6

GRACE DEFENDANTS'
MEMORANDUM IN OPPOSITION
TO PLAINTIFF'S MOTION FOR
PRELIMINARY INJUNCTION
(MOTION 2)

CONTENTS

I.	INTRODUCTION	1

I. INTRODUCTION

Plaintiff Marco Barbanti, a residential and commercial landlord purporting to act on behalf of a class of individual Washington State homeowners, seeks an unprecedented mandatory injunction. Plaintiff asks this Court to compel defendant W.R. Grace & Co.-Conn. (collectively, with the other defendants, "Grace") to fund the issuance of an "emergency notice" containing a warning regarding Zonolite Attic Insulation ("ZAI"), to be published in Washington State Sunday newspapers. As Grace describes below, no court has issued a preliminary injunction requiring a warning under circumstances like those presented here. Nothing about this case justifies such an extraordinary and unprecedented order. Here:

- The evidence of any health risk to the public is minimal or nonexistent. The material, which is not even classified as asbestos-containing under Environmental Protection Agency ("EPA") regulations, poses no significant risk to homeowners—not in place, or even if occasionally disturbed during maintenance and remodeling. Declaration of Dr. Morton Corn, dated September 11, 2000 ("Corn Dec."), (Ex. 2 to Declaration of Rocco N. Treppiedi Regarding Defendants' Response to Plaintiff's Motion For Preliminary Injunction dated October 6, 2000) ("Oct. 6 Treppiedi Dec."), ¶¶ 24-26. There is simply no hazard requiring a warning, and certainly no emergency requiring an alarm crafted and distributed on a preliminary basis. See Affidavit of Bertram Price dated September 5, 2000 ("Price Aff.") (Ex. 5 to Oct. 6 Treppiedi Dec.), p. 22. Indeed, the presence of trace amounts of asbestos in ZAI

1 has been known to regulators for over 20 years. For example, an
2 exposure assessment published by the EPA in 1985 concludes that
3 "[o]nce in place, vermiculite attic insulation would probably not lead to
4 subsequent consumer exposure. The type of attic in which vermiculite
5 is used is ordinarily isolated from the rest of the home and is not
6 regularly entered." Price Aff., p. 9. The EPA's current web page
7 concludes: "[D]ue to the physical characteristics of vermiculite, there's
8 a low potential the material is getting into the air. If the insulation is not
9 exposed to the home environment—for example, it's sealed behind
10 wallboards and floorboards or is isolated in the attic which is vented
11 outside—the best advice would be to leave it alone." EPA Region 1
12 website: "Q&A Regarding Vermiculite Insulation" (Ex. 17 to Oct. 6
13 Treppiedi Dec.).

19
20
21
22
23
24
25

- 26 ● Plaintiff's own actions, including his failure to give his own tenants any
27 warning about ZAI until months after seeking an "emergency notice"
28 from this Court, show he does not genuinely believe a real emergency to
29 exist here. Indeed, plaintiff's counsel admitted at the hearing on
30 plaintiff's class certification motion that he did not "want to exaggerate
31 by calling [the alleged public health concern posed by vermiculite] an
32 emergency necessarily." Transcript of September 21, 2000 hearing
33 ("Sept. 21 Trans."), p. 24:1-2 (Ex. 16 to Oct. 6 Treppiedi Dec.).
34
35
36
37
38
39
40
41
42 ● The public—particularly in the state of Washington—has already been
43 well informed about any alleged risks associated with vermiculite
44 insulation. The EPA has noted: "*A tremendous amount of information*
45
46
47

1 [about asbestos contamination in vermiculite] has been made available
2 to the public via print, television/radio and the internet." EPA Asbestos
3 Home Page, www.epa.gov/opptintr/asbestos/verm.htm (Ex. 18 to Oct. 6
4 Treppiedi Dec.) (emphasis added). The EPA itself has addressed the
5 issue in press releases and its website. A court-ordered warning will
6 add nothing meaningful to the information available to the public and
7 will detract from regulatory agencies' guidance on the issue.
8
9

10
11 ● A host of regulatory agencies and authorities are in the midst of
12 studying vermiculite products. Among these are the EPA, the Agency
13 for Toxic Substances and Disease Registry ("ATSDR"), the
14 Occupational Safety and Health Administration ("OSHA"), the
15 Consumer Product Safety Commission ("CPSC"), and the Washington
16 State local air quality control authorities. These agencies have
17 jurisdiction over, and expertise in evaluating, any risks associated with
18 vermiculite. None has declared a need for a warning of the type
19 proposed by plaintiff. By compelling a warning on a preliminary basis,
20 this Court would usurp the authority vested in these agencies to make
21 the required scientific assessments and corresponding public policy
22 determinations. It would further risk setting policy that is inconsistent
23 with the determinations of the regulatory authorities. Indeed, plaintiff's
24 own medical expert, Dr. Henry A. Anderson, Wisconsin's Chief Medical
25 Officer for Occupational and Environmental Health, is awaiting EPA's
26 leadership before taking any proactive steps in his state because, in his
27 opinion, "it has to be national . . . the lead and the announcements will
28

46
47

1 come via ATSDR and EPA." Deposition of Dr. Henry A. Anderson
2 ("Anderson Dep.") (Ex. 7 to Oct. 6 Treppiedi Dec.), p. 143:2-3.
3

- 4 ● Plaintiff has no statutory or legal authority for the relief he seeks.
5 Injunctive relief is not available under the Washington Consumer
6 Protection Act, RCW 19.86.010 et seq. (the "CPA"). The CPA permits
7 injunctions only to address "further violations" of the act. Since Grace
8 has not manufactured ZAI for over 15 years, there can be no injunction
9 applicable to Grace's conduct. The CPA does not impose a duty to
10 consumers that postdates the sale of a product. Furthermore, no such
11 ongoing duty could impose CPA liability here, where the alleged
12 consequences of its breach would be personal injuries—which are not
13 cognizable under the CPA. Finally, plaintiff himself has no claim under
14 the CPA, as he admits he never relied on any affirmative statement or
15 representation of Grace in connection with ZAI and thus cannot
16 establish the crucial element of causation. Nor is injunctive relief
17 available under the Washington State Product Liability Act, RCW
18 7.72.010 et seq. (the "WPLA"), because the only relief allowed under
19 the WPLA is damages.
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35

36 Under these circumstances, plaintiff falls far short of showing the "clear legal
37 ... right" required for even an ordinary prohibitory injunction, Tyler Pipe Indus.,
38 Inc. v. Department of Revenue, 96 Wn.2d 785, 792 (1982) (citation omitted), and
39 even farther from showing entitlement to the extraordinary mandatory injunction
40 sought here. See State ex rel. Pay Less Drug Stores v. Sutton, 2 Wn.2d 523, 532
41 (1940). Because the current scientific record shows that there is *no* hazard to
42
43
44
45
46
47

1 homeowners from existing ZAI, plaintiff can establish neither a probability of success
2 on the merits nor anything more than a speculative harm. Equitable factors do not
3 support an injunction because the unsupported "warning" plaintiff seeks would cause
4 consumer confusion, harm the public interest, and damage Grace's business and
5 reputation.
6
7
8
9

10 II. FACTUAL BACKGROUND

11 A. ZONOLITE ATTIC INSULATION

12 The product at issue is Grace's Zonolite Attic Insulation. ZAI, which was
13 made of an expanded mineral known as vermiculite, was used for decades. ZAI
14 offered consumers an easy-to-apply, loose-fill insulation product that could
15 significantly increase the insulation value in a home. The product was used in a
16 variety of different attic applications—poured into the spaces between the joists of the
17 attic floor, added as a supplemental insulation in areas where fiberglass and other
18 sheet insulation could not reach, or used on top of or underneath fiberglass or mineral
19 wool insulation to provide an additional insulation layer. In many cases, it was
20 covered with a layer of plywood, lumber, or wood composite. Over the years, ZAI
21 has saved Washington State homeowners millions of dollars in energy costs. Grace
22 ceased selling ZAI in 1984.

33
34
35
36

37 B. TRACE OR NEGLIGIBLE AMOUNTS OF ASBESTOS IN 38 ZONOLITE ATTIC INSULATION

39 Grace never added asbestos to ZAI. Vermiculite itself is not asbestos.
40 However, the vermiculite ore Grace extracted from its Libby, Montana, vermiculite
41 mine contained small amounts of tremolite asbestos. Most of this was eliminated as
42 the vermiculite was milled at the mine. The product that was shipped from the mines
43
44
45
46
47

1 to the expanding plants was called vermiculite concentrate. At the expanding plants,
2 the concentrate was processed through high temperature furnaces where the heat
3 caused the vermiculite to expand. During the expansion process, virtually all the
4 remaining amounts of asbestos were eliminated so that in the final expanded product,
5 the presence of asbestos in vermiculite was negligible. Plaintiff's own expert, Donald
6 Hurst, acknowledged that his testing showed that the ZAI from Spokane homes
7 contained less than 1/10 of 1% by weight of asbestos, and that neither federal nor
8 state agencies would define the ZAI vermiculite as an asbestos-containing product.¹
9

10 C. ASBESTOS

11 All people living in urban areas have many asbestos fibers in their lungs simply
12 by living in that environment, yet there is no evidence that consistently breathing
13 ubiquitous environmental levels of asbestos over an entire lifetime causes any
14 increased incidence of asbestos-related disease. Declaration of William G. Hughson,
15 M.D., Ph.D., dated September 7, 2000 (Ex. 3 to Oct. 6 Treppiedi Dec.), ¶ 8.
16 Although all who live in urban areas are exposed to low levels of asbestos, there has
17 obviously been no widespread epidemic of asbestos-related disease from this
18 exposure. It is only when respirable fibers are somehow released from an asbestos-
19 containing building material in sufficient quantities over a sufficient period of time

46
47

¹ Plaintiff has attempted to "poison the well" by repeatedly mischaracterizing Grace's historical acts in making and selling ZAI even though the history of what Grace knew, and when, is not relevant to whether an injunction should be issued. As such, Grace need not and will not respond to those mischaracterizations here, although at the appropriate time they will be fiercely contested.

1 that a potential health risk can arise. Id. ¶ 5. Not every exposure to asbestos results in
2 disease. Id. Whether a person is at increased risk from exposure to asbestos,
3 including exposures from asbestos-containing materials in buildings, depends on the
4 level of exposure (dose), the type of asbestos fibers, and the size of the fibers. Id.
5 There are levels of asbestos exposure below which disease has not been shown to
6 occur. Id. This is true for asbestosis, lung cancer, and mesothelioma. Id.
7
8
9
10
11

12 In order to contract an asbestos-related disease, an individual must have a
13 significant, cumulative lifetime exposure to asbestos that is not possible from ZAI,
14 given the extremely low and often nonexistent levels of asbestos in the breathable air
15 of homes insulated with it. As the EPA itself has noted, "[A]t very low exposure
16 levels, the risk may be negligible or zero." Price Aff., p. 13 (quoting testimony of
17 Linda Fisher of EPA, before House Subcommittee on Education and Labor, April 3,
18 1990).
19
20
21
22
23
24
25

26 D. THE ABSENCE OF AN EMERGENCY

27 No credible evidence suggests that the mere presence of asbestos in buildings,
28 or even the presence of materials containing 10-20% asbestos as an added ingredient,
29 creates a hazard. The EPA has specifically addressed the subject in Managing
30 Asbestos in Place, its most recent guidance document on the asbestos-in-buildings
31 issue. That publication succinctly summarizes the EPA's policy on asbestos in
32 buildings with respect to products containing more than 10 times as much asbestos as
33 ZAI. The EPA's book notes: "The average airborne asbestos levels in buildings
34 seems to be very low . . . the health risk to most occupants appears to be very low."
35 Price Aff., p. 13 (quoting Managing Asbestos in Place: A Building Owner's Guide to
36 Operations and Maintenance Programs for Asbestos-Containing Materials, EPA 20T-

47

1 2003, July 1990). Decades of air monitoring in buildings containing asbestos
2 materials have shown that there are no more asbestos fibers in the air inside buildings
3 than in the outside air. Corn Dec. 18.
4
5

6 Nothing suggests that the situation is at all different for ZAI²—indeed the
7 extremely low trace amounts of asbestos in the product make this teaching even more
8 significant. Even plaintiff's own expert acknowledges that undisturbed vermiculite
9 poses no risk. See Anderson Dep., pp. 47, 55-56 ("critical factor is not how much
10 [asbestos fiber] is there, but how much you can stir up," because "that's how fibers
11 become airborne and get up into the breathing zone").
12
13
14
15
16
17

18 There is accordingly no heightened risk that any resident in a building
19 containing ZAI will suffer from an asbestos-containing disease. Dr. Morton Corn,
20 former head of OSHA and a renowned expert in industrial hygiene, inspected the
21 houses of putative class members that were made available by plaintiff's counsel, and
22 concluded that "the vermiculite attic insulation present within the homes does not
23 pose an increased or significant risk to the health of the occupants[.]" Corn Dec. ¶ 22.
24 Furthermore, it is Dr. Corn's opinion that "there is an insignificant probability that
25 exposure to airborne fibers would occur." Id. ¶ 23.² In fact, in the laboratory analysis
26 of air samples collected from seven plaintiffs' homes that were inspected by the

37

38
39 ² While plaintiff cites Harashe v. Flintkote Co., 848 S.W.2d 506 (Mo. Ct.
40 App. 1993), as an alleged incident of disease from exposure to ZAI, Mr. Harashe was
41 a laborer for many years who had a history of extensive exposure to other asbestos-
42 containing products such as pipe and boiler insulation. See Anderson Dep., pp. 117-
43 18 (acknowledging Mr. Harashe's exposure to asbestos pipe and boiler insulation).
44
45
46
47

1 parties, there were no amphibole³ asbestos fibers, of any size, observed in the
2 analysis. Affidavit of Richard L. Lee dated September 18, 2000 ("Lee Aff.") (Ex. 4 to
3 Oct. 6 Treppiedi Dec.), ¶ 18.
4

5
6 Plaintiff argues that "maintenance, repair, and remodeling" in homes with ZAI
7 could somehow put vermiculite homeowners at risk and that a warning in a Sunday
8 newspaper will somehow correct the purported problem. But even plaintiff's own test
9 results—when appropriately adjusted for any time-weighted exposures and using
10 appropriate direct analytical technologies that count only asbestos fibers—generally
11 show levels within the OSHA limits. Lee Aff. ¶ 21. The only possible exception to
12 this was the alleged 70-minute simulation involving shoveling out of insulation in the
13 attic—by definition, a once-in-a-lifetime activity. This activity will not create a
14 significant risk unless an individual was exposed to such levels for a continual period,
15 which is unrealistic. In Dr. Corn's opinion, even if such activities were undertaken
16 without protection, "such intermittent exposure during the attic remodeling or
17 renovations would not have any health significance." Corn Dec. ¶ 23.

19
20
21
22
23
24
25
26
27
28
29

30 Deposition testimony has also made clear that residents simply do not disturb
31 ZAI except in rare and extraordinary circumstances. For example, Mr. Matthews, a
32 former carpenter, has never conducted any renovation in his home and plans to do
33 none. Deposition of Ernest H. Matthews, dated August 22, 2000 ("Matthews Dep.")
34 (Ex. 14 to Oct. 6 Treppiedi Dec.), pp. 6:18-7:25, 48:13-16. Neither has
35 Ms. Thurman. Deposition of Rosemarie E. Thurman, dated August 21, 2000

37
38
39
40
41
42
43

44
45 ³ This is the type of asbestos sometimes found in vermiculite from the Libby
46 mine.
47

1 ("Thurman Dep.") (Ex. 15 to Oct. 6 Treppiedi Dec.), at p. 52:14-17. Mr. Hatch, who
2 already has conducted work in his attic, was already taking steps to protect himself
3 from dust as part of ordinary dust protection activities. Deposition of Rand T. Hatch,
4 dated August 21, 2000 ("Hatch Dep.") (Ex. 11 to Oct. 6 Treppiedi Dec.), pp. 39:16-
5 41:8. Mr. Barbanti has never even been in his own attic and does not even know if it
6 contains vermiculite. Deposition of Marco Barbanti, dated August 17, 2000
7 ("Barbanti Dep.") (Ex. 8 to Oct. 6 Treppiedi Dec.), p. 211:2-10.
8

9
10 Mr. Barbanti himself clearly does not believe there is a significant risk.
11 Although he comes to this Court claiming there is an emergency and an "immediate,
12 present, and ongoing threat," his actions speak more eloquently about his true beliefs.
13 Mr. Barbanti owns some 50 or so properties, but he has inspected no more than seven
14 to see if they contain the material. Id. at pp. 7:23-8:2, 11:1-3, 216:15-223:1, 223:12-
15 224:7. He has not even inspected his own residence to see if it has ZAI, although he
16 has lived there for 20 years. Id. at pp. 13:7, 211:2-10, 217:14-17. He has not
17 inspected any of these homes for other asbestos-containing materials, although he
18 knows such products were widely used. Although he is seeking an urgent notice to all
19 homeowners about the vermiculite issue, he did not provide such a notice to those
20 residing in his buildings until he was prompted to do so by the interrogatories Grace
21 served on him in this case. Id. at pp. 184:19-187:2. Ironically, Mr. Barbanti himself
22 did not provide a warning to his own tenants until months after he came to this Court
23 seeking an "emergency notice." Barbanti Dep., pp. 175:18-24, 186:4-187:2.
24

25
26 There is thus no credible scientific evidence that the risk to a homeowner from
27 ZAI is significant or that ZAI should somehow be singled out from the host of
28 allegedly hazardous materials in a home—fiberglass, radon, exposed electrical wires,

1 asbestos-containing duct wrap, floor tile, or drywall—for a special one-time warning
2 issued on a preliminary basis.
3

4
5 Indeed, despite plaintiff's claim that there is an emergency or imminent health
6 hazard, the actions of his own counsel show there is no need for urgent action.
7
8 Mr. Barbanti is represented by counsel who have litigated asbestos cases against W.R.
9 Grace for over 15 years. These experienced lawyers have themselves been aware of
10 the presence of trace levels of asbestos in vermiculite products *for decades*. They
11 have argued as early as 1993 that the trace elements of asbestos in vermiculite are a
12 hazard. Documents they have submitted in an effort to establish a need for an
13 emergency preliminary injunction have been part of asbestos property damage
14 litigation since the early 1980s. See Plaintiff's Exs. 1-4; 9-15; 17-18. Their own
15 experts' testing dates back to at least 1993. See Ex. 18 to the Declaration of Richard
16 Hatfield submitted by plaintiff. They rely on EPA documentation covering the issue
17 of asbestos and vermiculite going back as far as 1985. See Ex. A to Declaration of
18 Christi L. Bergound in Support of Motion for Class Certification (submitted by
19 plaintiff). Dr. John Dement, who has been testifying for plaintiff's counsel for years
20 and on whom plaintiff ironically now relies in support of his contention that an
21 emergency exists here, testified years ago regarding asbestos in vermiculite and its
22 alleged hazard. See Deposition of John McCray Dement, Ph.D. dated August 31,
23 2000 (Ex. 10 to Oct. 6 Treppiedi Dec.), pp. 143:5-144:19. With all this material in
24 their possession for years, plaintiff's counsel have done nothing about this supposed
25 risk. Their delay in acting until now suggests that they themselves were for years
26 indifferent to any perceived risk or, more likely, that this alleged "emergency" is a
27 creature of their own invention. Indeed, plaintiff's counsel admitted during oral

1 argument of the class certification motion that an emergency does not exist. While
2 discussing the alleged public health problem plaintiff contends is posed by
3 vermiculite, counsel expressly stated that "I don't want to exaggerate it by calling it an
4 emergency necessarily." Sept. 21 Trans., p 24:1-2, (Ex. 16 to Oct 6 Treppiedi Dec.).
5
6
7
8

9 E. MEDIA ATTENTION

10 In the meantime, however, the issue of asbestos and vermiculite has received
11 widespread publicity in Washington State. Both over the years and in the last six
12 months, the print and electronic media have repeatedly carried stories about asbestos
13 in construction products, about tremolite in Grace's vermiculite mined at Libby, and
14 indeed about tremolite in ZAI. There have been numerous high-profile articles on
15 asbestos and vermiculite products, including attic insulation, published in the state.
16 Articles have appeared in the major newspapers (The Seattle Times, Seattle Post-
17 Intelligencer, The Spokesman-Review) as well as television and radio news media,
18 and have been disseminated even more widely via the wire services and the Internet.
19 Affidavit of Margaret C. Brown ("Brown Aff.") (Ex. 1 to Oct. 6 Treppiedi Dec.),
20 ¶¶ 8-11. The Seattle Post-Intelligencer has aggressively covered asbestos in general,
21 and vermiculite products in particular, including two ongoing series of special reports,
22 which comprises in excess of 40 articles to date. Id. ¶ 9. This coverage, as well as
23 more than 40 articles in The Spokesman-Review, has focused on the Libby mine and
24 ZAI. Id. ¶¶ 9, 11. In addition, action by public agencies, such as the EPA, has
25 received widespread media attention, and the agencies have engaged in extensive
26 public communications efforts of their own. Brown Aff. ¶ 13; Price Aff. § 4.1. As
27 the EPA itself noted in its website, "A tremendous amount of information has been
28 made available to the public via print, television/radio and the internet." EPA

1 Asbestos Home Page (Ex. 18 to Oct. 6 Treppiedi Dec.). Notably, both plaintiff and
2 those who submitted affidavits on plaintiff's behalf were aware of the presence of
3 small amounts of asbestos in ZAI through media publicity. See Matthews Dep.,
4 pp. 14:23-15:12, 21:6-22:20; Thurman Dep., pp. 4:24-5:20, 23:18-23; Hatch Dep.,
5 pp. 4:18-6:3; Deposition of Brendan J. King, dated August 18, 2000 (Ex. 13 to Oct. 6
6 Treppiedi Dec.), pp. 4:4-6:4, 43:23-45:25, 50:23-51:2; Barbanti Dep., pp. 4:11-
7 23, 23:12-24:7; Deposition of Ralph E. Busch, dated August 22, 2000 (Ex. 9 to Oct. 6
8 Treppiedi Dec.), pp. 4:20-5:11, 13:19-18:7. Indeed, plaintiff and each affiant testified
9 that as a result of the media publicity, they took action, including contacting plaintiff's
10 counsel, ceasing renovations, and sealing up attics. Thurman Dep. p. 42:5-17; Busch
11 Dep. p. 19:6-14; King Dep. pp. 28:22-29:10; Hatch Dep. pp. 58:20-59:5; Matthews
12 Dep. p. 47:22-25; Barbanti Dep. pp. 4:11-5:8.

18
19
20
21
22
23
24
25 Plaintiff is decidedly unclear about what any warning will accomplish. The
26 warning that plaintiff seeks to have this Court issue has been drafted not by an expert
27 in warnings or human factors, but by a former public relations executive who now
28 makes a living providing class notifications. Deposition of Todd Bruce Hilsee dated
29 August 8, 2000 ("Hilsee Dep.") (Ex. 12 to Oct. 6 Treppiedi Dec.), pp. 6:6-14, 8:6-20;
30 20:10-17. He proposes to be paid an hourly rate plus a commission on all advertising
31 costs associated with publicizing any warning. Id. pp. 30:10-31:7. In other words,
32 the more often the warning is given, the more he is paid. He has no information
33 regarding whether those who will receive the warning will respond, whether any
34 warning will be heeded, or whether the type of warning proposed is calculated to
35 reach those plaintiff asserts need to be warned. Id. pp. 10:2-11:17, 29:5-16, 96:19-
36 98:20, 119:22-120:4.

III. ARGUMENT

A. PLAINTIFF CANNOT MEET HIS HEAVY BURDEN FOR OBTAINING THE EXTRAORDINARY MANDATORY INJUNCTION REQUESTED.

1. Plaintiff's Request Is Unprecedented and Improperly Asks This Court to Prejudge a Material Issue in This Case.

Plaintiff's request in this case is not only for a mandatory injunction, but for one that is unique and unprecedented. Plaintiff seeks a statewide "warning" to be issued, before a trial on the merits, that ZAI is a potential health hazard to homeowners. This is the very issue that plaintiff must prove at trial. Contrary to plaintiff's assertion, courts have consistently denied preliminary injunctions seeking the affirmative issuance of warnings before a trial to determine whether a hazard even exists.

In Punnett v. Carter, 621 F.2d 578 (3d Cir. 1980) ("Punnett I"), the Third Circuit rejected the plaintiffs' request for an injunction similar to that sought here. Plaintiffs, veterans of United States Army atomic tests, sought a preliminary injunction to compel a public warning that children born to test participants might bear higher risks of mutagenic defects. There, as here, the court was "presented not merely with a motion for an injunction to preserve the status quo *pendente lite* but with a request for a mandatory injunction *that would have the effect of granting a substantial portion of the relief sought in the plaintiffs' complaint.*" Id. at 583 (emphasis added). The court noted that—as in this case—it was not to decide at this stage whether a hazard existed. Id. at 582. Plaintiffs failed to "establish[] with any certainty" the existence of a hazard or any risk that resulted from it. Id. at 586.

1 Accordingly, the court concluded that plaintiffs had not met the "heavy burden"
2 required of them, and denial of the injunction was appropriate. Id. at 588.
3

4 Similarly, in Sanborn Mfg. Co. v. Campbell-Hausfeld/Scott Fetzer Co., 997
5 F.2d 484, 489-90 (8th Cir. 1993), the court in a deceptive trade practices suit rejected
6 a mandatory preliminary injunction that would have required the defendant to notify
7 consumers that it had falsely labeled its products. According to the court, "[r]equiring
8 [defendant] to take affirmative action such as sending a notice to all of its customers
9 indicating that it ha[d] falsely labeled its products before that issue has been decided
10 on the merits goes beyond the purpose of a *preliminary* injunction." Id. at 490.
11 There, as here, a preliminary injunction was improper because the court was being
12 asked to decide the parties' rights before a trial on the merits.⁴
13
14
15
16
17
18
19
20
21

22 In Churchill Village, L.L.C. v. General Elec. Co., 2000 U.S. Dist. LEXIS 7505
23 (N.D. Cal. May 10, 2000), plaintiffs sought to compel G.E. to issue a corrective
24 disclosure regarding a safety defect in certain types of dishwashers, asserting that
25 G.E.'s prior notices were misleading and incomplete. The court denied the request,
26 stating that plaintiffs' "already substantial burden" in obtaining a preliminary
27 injunction "is subject to 'heightened scrutiny' where, as here, a court is asked to order
28 a defendant to engage in certain affirmative conduct." Id. at *9 (citation omitted).
29
30
31
32
33
34
35
36
37

38
39 ⁴ The district court also had denied the preliminary injunction in part on the
40 ground that "notice to past purchasers presents practical difficulties [because it] is not
41 clear to whom the notice would go or precisely what it would say." Sanborn Mfg.
42 Co. v. Campbell-Hausfeld/Scott Fetzer Co., 828 F. Supp. 652, 656 (D. Minn. 1992),
43 aff'd, 997 F.2d 484 (8th Cir. 1993). Similar difficulties exist in this case.
44
45
46
47

1 The court rejected the plaintiffs' argument that an injunction was necessary to protect
2 the public:
3

4
5 Even if the court were to accept the possibility that the safety of
6 consumers could be endangered through continued use of the
7 dishwashers, a mere possibility of irreparable injury would not
8 meet plaintiffs' heavy burden on a preliminary injunction.
9

10 Id. at *20 (citing Colorado River Indian Tribes v. Town of Parker, 776 F.2d 846, 849
11 (9th Cir. 1985)). Thus, Punnett I, Sanborn, and Churchill Village address, and reject,
12 injunctions similar to that which plaintiff seeks here.
13
14

15
16 The only authority plaintiff provides for his extraordinary contention that
17 courts can and should order warnings on a preliminary basis is a single 1982 case
18 from the federal district court in Maryland.⁵ Nissan Motor Corp. v. Maryland
19 Shipbuilding & Drydock Co., 544 F. Supp. 1104 (D. Md. 1982), aff'd without op., 742
20 F.2d 1449 (4th Cir. 1984). In Nissan, plaintiff originally sought, and was denied, an
21 injunction prohibiting spray painting operations at the defendant's shipyard. After
22 amending its complaint to add new claims based on damage caused by smoke from
23
24
25
26
27
28
29
30
31

32
33 ⁵ Plaintiff also relies on an unreported stipulation in Blakely v. Chevron USA,
34 Inc., No. 962107 (S.F. Super. Ct. Aug. 5, 1994), which has no authoritative weight.
35 In Blakely, the parties *stipulated* to the sending of a notice in a July 13, 1994
36 stipulation, which was merely filed with the court. The court in no way ordered the
37 notice, and neither signed nor entered the stipulation. Plaintiffs' submission does
38 include an order dated August 5, 1994, but this order does not even mention any
39 notice requirement; instead, it requires defendant to preserve and identify engine
40 components.
41
42
43
44
45
46
47

1 the vessels in the shipyard, Nissan obtained a temporary restraining order to require
2 the shipyard to "promptly notify all vessels located at its shipyard that the discharge of
3 soot, ash and pollutants from their smokestacks might cause harm to vehicles located
4 on adjoining property, and that such vessels might then be held responsible for any
5 damage caused through discharge." Id. at 1107. The TRO in Nissan involved a much
6 narrower and more limited warning than is sought here. The warning was to be issued
7 to a very limited group of third parties; significantly, those third parties were the
8 entities alleged to have *caused* the harm at issue. Moreover, final disposition of
9 Nissan shows that the TRO was improvidently granted and the order was ultimately
10 dissolved. After a full trial, the court determined that those who received the warning
11 (the ships) were, in fact, *not* liable for damage from the discharge emitted. Id.
12 at 1114. The court held that the defendant shipyard was similarly *not* liable for
13 damage caused by the discharge, and dissolved the TRO. Id. at 1114-20, 1122. The
14 court recognized the potential harm that could arise from the TRO, holding that "the
15 utility of [the shipyard's] conduct outweighs the gravity of the occasional harm which
16 [the plaintiff] has sustained." Id. at 1118. Fortunately, the potential damages from
17 shutting down or deviating from normal operations as a result of the TRO appear to
18 have been reduced because, as found by the court, ship owners apparently ignored the
19 notice. Id. 1115.

40
41
42
43
44
45
46
47
Far from demonstrating that this Court should act preliminarily, Nissan shows
the unwarranted dangers presented where a court goes against the great weight of the
authority, even in issuing a far more narrow injunction than requested here, and grants
the extraordinary preliminary relief of the type sought here.

1 In this case, plaintiff seeks a declaration by this Court, before trial, that would
2 prejudice the core issue of whether there is an emergency hazard. As set forth more
3 fully above in Section II.D., there is more than ample evidence that no emergency
4 hazard exists. Neither plaintiff nor his counsel nor even plaintiff's medical expert,
5 Dr. Anderson, has acted in a manner consistent with the emergency they now profess.
6 Furthermore, Grace's industrial hygiene expert, Dr. Morton Corn (who has inspected
7 the houses of putative class members), agrees that "vermiculite attic insulation
8 material in houses presents no immediate public health hazard or emergency to
9 persons who may reside in the homes or in the area immediately outside the homes."
10 Corn Dec. ¶ 27. Dr. Richard J. Lee, an expert in microscopy and materials
11 characterization, examined the laboratory analysis of air samples taken in each of the
12 seven homes of putative class members and concluded that there "were no amphibole
13 [i.e., tremolite] asbestos fibers of any size observed in the analysis." Lee Dec. ¶ 18.
14 ZAI does not pose an emergency hazard that must be acted upon immediately and it
15 would be improper for this core issue to be prejudiced at this time.
16
17
18
19
20
21
22
23
24
25
26
27
28
29

30 Plaintiff's evidence is simply insufficient to permit the extraordinary remedy he
31 seeks. Indeed, as in Punnett I, "[t]he risk . . . suggested [by the] plaintiff class [is too]
32 uncertain" to support an injunction. 621 F.2d at 588. At best, plaintiff can show only
33 that there is a dispute on this fundamental issue. Washington law is clear that under
34 such circumstances an injunction is improper. Isthmian S.S. Co. v. National Marine
35 Eng'rs Beneficial Ass'n, 41 Wn.2d 106, 117 (1952) (injunction improper where there
36 are issues of material fact); Tyler Pipe, 96 Wn.2d at 793 (trial court must not
37 "adjudicate the ultimate rights in the lawsuit"); Kucera v. Department of Transp., 140
38 Wn.2d 200, 209 (2000).
39
40
41
42
43
44
45
46
47

1 Courts that have considered injunctions like that sought here have uniformly
2 rejected them. This Court should do the same. The injunction sought here asks this
3 Court to prejudge the case and should be rejected on that basis. In addition, it fails to
4 meet any of the requirements under Washington law for the issuance of an injunction
5 and is inappropriate as a matter of law.
6
7
8
9

10
11 **2. Mandatory Injunctions Like the One Sought Here Are**
12 **Disfavored Under the Law and Plaintiff Cannot Demonstrate**
13 **Legal Entitlement.**
14

15 Plaintiff's motion does not seek merely to restrain defendants in order to
16 preserve the status quo. Instead, plaintiff seeks to compel an affirmative act. Such an
17 injunction is mandatory, not prohibitory, and inherently seeks a *change*, not a
18 preservation, of the status quo. State ex rel. Pay Less Drug Stores v. Sutton, 2 Wn.2d
19 523, 535 (1940) (TRO requiring defendant to increase its prices improperly "changed
20 the status"). See also Stanley v. University of S. Cal., 13 F.3d 1313, 1320 (9th Cir.
21 1994) (quoting Martin v. International Olympic Comm., 740 F.2d 670, 674-75 (9th
22 Cir. 1984)) (mandatory preliminary injunction "goes well beyond maintaining the
23 status quo *pendente lite*"); Doe v. Tenet, 99 F. Supp. 2d 1284, 1294 (W.D. Wash.
24 2000) (injunction requiring defendant to perform an affirmative act it was not
25 currently performing is a mandatory injunction).
26
27
28
29
30
31
32
33
34
35
36

37 Such mandatory injunctions are rarely granted. They are disfavored and
38 subject to heightened scrutiny. Indeed, the court in Pay Less reversed a TRO *because*
39 it was mandatory. 2 Wn.2d at 532. Similarly, in Lanham v. Wenatchee Canal Co., 48
40 Wash. 337, 339 (1908), the court reversed a mandatory preliminary injunction that
41 had required defendant to deliver water to the plaintiff's land. The court stated that
42
43
44
45
46
47

1 "[i]f a mandatory injunction may issue at all before final hearing, *it is only where the*
2 *plaintiff's right to relief is clear and certain.*" Id. (emphasis added).
3

4 As in Washington, mandatory injunctions are also "particularly disfavored"
5 under federal law, and are denied "'unless the facts and law *clearly favor the moving*
6 *party.*"' Stanley, 13 F.3d at 1320 (emphasis added) (citations omitted). Further,
7
8 "'mandatory injunctions . . . are not granted unless extreme or very serious damage
9 will result and are not issued in doubtful cases or where the injury complained of is
10 capable of compensation in damages.'" Anderson v. United States, 612 F.2d 1112,
11 1115 (9th Cir. 1979) (quoting Clune v. Publishers' Ass'n of New York City, 214 F.
12 Supp. 520, 531 (S.D.N.Y. 1963), aff'd per curiam, 314 F.2d 343 (2d Cir. 1963)).
13 Therefore, "courts should be extremely cautious" about issuing a preliminary
14 mandatory injunction. Committee of Cent. Am. Refugees v. Immigration &
15 Naturalization Serv., 795 F.2d 1434, 1441 (9th Cir. 1986) (citation omitted),
16 op. amended, 807 F.2d 769 (9th Cir. 1987).
17
18

19 Plaintiff cannot meet the heavy burden he faces to obtain the unprecedented
20 mandatory injunction he seeks here. If authorized at all, an injunction can only be
21 used to preserve the status quo and to prevent loss of rights before trial. Tyler Pipe,
22 96 Wn.2d at 795-96. Even a run-of-the-mill prohibitory injunction is an extraordinary
23 equitable remedy that "will not issue in a doubtful case." Isthmian, 41 Wn.2d at 117.
24 To demonstrate entitlement to even a prohibitory injunction, the moving party must
25 meet three prerequisites: (1) "'a clear legal or equitable right"; (2) "'a well-grounded
26 fear of immediate invasion of that right"; and (3) "'actual and substantial injury" as a
27 result of the invasion. Tyler Pipe, 96 Wn.2d at 792 (quoting Port of Seattle v.
28 International Longshoremen's & Warehousemen's Union, 52 Wn.2d 317, 319 (1958)).

34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 In addition, the moving party bears the burden of establishing that equitable factors,
2 including the public interest, weigh in favor of granting the injunction. Kucera, 140
3 Wn.2d at 209. The moving party *must* establish *each* of the Tyler Pipe factors and the
4 support of equitable considerations; failure to meet any one of them requires denial of
5 the injunction. Kucera, 140 Wn.2d at 210.
6
7
8
9

10
11 a) Plaintiff Cannot Establish a Clear Legal or Equitable
12 Right.
13

14 Plaintiff cannot meet the first requirement of the Tyler Pipe test: there is no
15 "clear legal or equitable right" here. To establish this element, plaintiff must show a
16 "likelihood of that party ultimately prevailing on the merits." Tyler Pipe, 96 Wn.2d at
17 793. An injunction "will not issue in a doubtful case." Id. (quoting Isthmian, 41
18 Wn.2d at 117). In particular, an injunction *cannot* be issued where the evidence
19 conflicts on material issues of fact. Isthmian, 41 Wn.2d at 117-18. Further, in
20 assessing the likelihood of success, the court must not "adjudicate the ultimate rights
21 in the case"—which is precisely what plaintiff is asking the court to do here. Kucera,
22 140 Wn.2d at 216.
23
24
25
26
27
28
29
30
31

32 As set forth more fully above at pages 5-10 and 15, the issue of whether ZAI
33 presents a hazard to occupants is a material issue of fact that is contested in this case.
34 An injunction cannot issue under Washington law in the face of Grace's evidence that
35 ZAI poses no hazard. Moreover, plaintiff's statutory claims cannot, as a matter of
36 law, entitle plaintiff to an injunction. Plaintiff's Complaint alleges claims under the
37 CPA and WPLA. Neither affords a likelihood of prevailing on a claim for injunctive
38 relief.
39
40
41
42
43
44
45
46
47

1 Although RCW 19.86.090 authorizes injunctive relief for successful claims
2 under the CPA, plaintiff cannot avail himself of the provision here, because (a) the
3 terms of the CPA's injunction provision, and the CPA's inapplicability to claims for
4 personal injury, foreclose the injunction sought here, and (b) plaintiff cannot establish
5 the requisite element of causation.
6
7
8
9

10 The injunction sought by plaintiff is not permitted by the CPA. Injunctive
11 relief is applicable only "to enjoin further violations" of the Act. RCW 19.86.090.
12 Plaintiff's Complaint asserts only damage to *property* caused by purported
13 misrepresentations regarding ZAI. By its very nature, this purported harm (if any)
14 occurred at the time the product was purchased and installed in the buildings now
15 owned by plaintiff. See Plaza 600 Corp. v. W.R. Grace & Co., No. C89-1562D, 1991
16 WL 539568, at *2 (W.D. Wash. June 19, 1991) (alleged harm in asbestos property
17 damage case occurred upon installation of the product). The "unfair and deceptive"
18 conduct alleged to have caused this harm is purported deception in the marketing and
19 labeling of the product. It is only during this process that a property owner could have
20 relied on a purported misrepresentation that caused damage to his or her property.
21 However, Grace stopped manufacturing ZAI in 1984—over 15 years ago. It is no
22 longer labeling, packaging, or marketing the product, and thus there are no future sales
23 and no possibility of any "further violations." There is simply no conduct that may
24 be enjoined.
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40 Furthermore, no claim based on an ongoing duty can be brought under the CPA
41 in this case. First, claims for personal injuries are not cognizable under the CPA.
42 Washington State Physicians Ins. Exch. & Ass'n v. Fisons Corp., 122 Wn.2d 299, 318
43 (1993); Stevens v. Hyde Athletic Indus., Inc., 54 Wn. App. 366, 370 (1989). More
44
45
46
47

1 fundamentally, however, there is no CPA duty to consumers that extends beyond the
2 initial sale of a product. Johnston v. Beneficial Management Corp. of Am., 85 Wn.2d
3 637, 640 (1975), modified by Salois v. Mutual of Omaha, 90 Wn.2d 355 (1978).
4
5 Post-sale duties can be applied under the CPA only in circumstances involving an
6 ongoing relationship or promise—such as the sale of an insurance policy. Salois.
7
8 Indeed, a federal court in Washington has expressly held that the CPA did not create
9 an ongoing duty upon Grace to warn of the dangers of an asbestos product. Plaza
10 600, 1991 WL 539568, at *4.
11
12
13
14
15

16 In addition, as discussed at more length in Grace's briefing (and its forthcoming
17 oral argument) on its pending summary judgment motion, plaintiff cannot establish
18 causation, which is a required element of a CPA claim. Hangman Ridge Training
19 Stables, Inc. v. Safeco Title Ins. Co., 105 Wn.2d 778, 785 (1986) (among five
20 elements required for a CPA claim is a causal link between plaintiff's damages and an
21 alleged unfair and deceptive act). To establish causation where the claim is based on
22 an alleged false or misleading representation, proof is required that the plaintiff relied
23 on the alleged misrepresentation. Nuttall v. Dowell, 31 Wn. App. 98, 111 (1982). As
24 the summary judgment materials demonstrate, there is a failure of such proof here.
25 Plaintiff's discovery responses and deposition show that he has never purchased ZAI,
26 never received any communications regarding the product, and does not even know
27 who purchased the insulation installed in his properties or when it was purchased.
28 Accordingly, plaintiff never relied on any representation or misrepresentation made by
29 defendants and therefore has not suffered any injury to his property proximately
30 caused by any deceptive act allegedly committed by defendants.
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Nor is injunctive relief available under the WPLA. The WPLA provides in
2 relevant part that a "[p]roduct liability claim' includes any claim or action brought for
3 harm," RCW 7.72.010(4), with "harm" defined as "any *damages* recognized by the
4 courts of this state," RCW 7.72.010(6) (emphasis added). The WPLA contains no
5 provision permitting a claim for injunctive relief, and nothing in the case law
6 interpreting it suggests that such a claim is cognizable. Thus, because the WPLA
7 preempts all prior causes of action⁶ and the right to injunctive relief is conspicuously
8 absent from the WPLA, as a matter of law, plaintiff and the putative class have no
9 right to an injunction pursuant to the WPLA.⁷

10
11
12
13
14
15
16
17
18
19 b) Plaintiff Has Failed to Demonstrate a Well-Founded
20 Fear of Invasion.
21

22 Despite plaintiff's claims to the contrary, there is no dire emergency or
23 imminent threat to the public which will be exacerbated by awaiting a proper trial on
24 the merits on whether a harm actually exists. Plaintiff himself has taken no immediate
25 action with respect to the majority of his properties to inspect or notify residents of an
26 alleged hazard. (See Factual Background at p. 8.) Moreover, the EPA's studies of
27 vermiculite products indicate that the presence of trace amounts of asbestos poses no
28 significant risk to consumers. Similarly, plaintiff's own medical expert, who is
29
30
31
32
33
34
35
36
37

38
39 ⁶ Washington Water Power Co. v. Graybar Elec. Co., 112 Wn.2d 847, 855
40 (1989) (WPLA's definition of "product liability claim" "modifies 'previous existing
41 applicable law' by displacing common law causes of action.").

42
43
44
45 ⁷ There is likewise no authority supporting the proposition that injunctive relief
46 was available under pre-WPLA common law.
47

1 responsible for Wisconsin's occupational and environmental health programs, testified
2 that he has taken no "proactive" measures in his state because he is awaiting the
3 outcome of federal studies, and admits that the issue does not pose an "acute
4 emergency." Anderson Deposition, pp. 38, 128:7-129:13, 144:2. Plaintiff's counsel
5 have long known of the issues that they now raise as an "emergency," yet have taken
6 no action until now. (See Factual Background at pp. 9-10.) Finally, there has already
7 been widespread media attention focused on the issue of asbestos and vermiculite and,
8 as discussed in Section III.B., numerous governmental agencies are engaged in
9 ongoing and long-standing efforts to address the very issues raised by plaintiff's
10 motion.
11

12 In short, there is nothing to suggest that there is anything urgent or imminent
13 that requires an immediate and premature warning about an alleged hazard that has yet
14 to be proved.
15

16
17 c) **Plaintiff Has Failed to Establish Actual and Substantial
18 Injury.**
19

20 Plaintiff also cannot establish "actual and substantial injury," as required by the
21 third element of Tyler Pipe. As discussed above, scientific evidence shows that there
22 is *no* existing hazard. (See Factual Background.) At best, the declarations submitted
23 by plaintiff show only that there is a dispute regarding this crucial issue. This is
24 patently insufficient to demonstrate entitlement to a mandatory injunction.
25

26 An injunction cannot issue where the alleged harm is speculative and
27 unproven:
28

29
30 An injunction is an extraordinary equitable remedy designed to
31 prevent serious harm[,] . . . not to protect a plaintiff from mere
32 inconveniences or speculative and insubstantial injury.
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Tyler Pipe, 96 Wn.2d at 796. To establish that the harm is not speculative, the
2 plaintiff is required to prove causation and the lack of an adequate remedy at law.
3
4 Kucera, 140 Wn.2d at 224.
5

6
7 The existence of a dispute on the central question of whether ZAI actually
8 causes harm places this case squarely within the holding of Kucera, where an
9 injunction was found improper. Id. at 216-17. In Kucera, the Washington Supreme
10 Court reversed the trial court's grant of a preliminary injunction enjoining the
11 operation of a new state ferry at speeds alleged to damage plaintiff's shoreline
12 property. The trial court had premised its injunction on a finding of the state's "total
13 failure" to follow the minimal requirements of state environmental laws in deploying
14 the vessel, reasoning that no further proof of harm was required. The Washington
15 Supreme Court reversed, criticizing the trial court for failure, among other things, to
16 require a showing of causation of actual and substantial injury. Id. at 224. On the
17 question of causation, the court noted circumstances quite similar to those existing
18 here:
19
20
21
22
23
24
25
26
27
28
29

30
31 *[B]oth parties vigorously dispute whether the operation of the*
32 *Chinook actually causes harm to the environment. Were we to*
33 *hold [state environmental law] does or does not apply to the*
34 *State's actions here, our decision "would be the equivalent of a*
35 *decision on the merits, a task for which this court is ill suited."*
36
37

38 Id. at 216-17 (emphasis added) (citation omitted). The court went on to note that if
39 operation of the vessel did not "significantly and adversely impact[] the
40 environment," then "there is clearly no threatened harm to enjoin." Id. at 219.
41
42 Because there had been no showing of such causation, the injunction was held
43
44
45
46
47

1 improper. Id. at 224. The same result is required here, where this central issue is
2
3 disputed.

4
5 In addition, plaintiff's motion for preliminary injunction fails to demonstrate
6 that he lacks adequate alternative remedies. See id. at 210-12 (injunction
7 inappropriate where property owners had adequate remedy for damages). If, as
8 plaintiff asserts, his property has been harmed by ZAI, he can seek damages.
9

10
11 Any alleged harm to property has already occurred, Plaza 600 Corp., 1991 WL
12 539568, so an injunction is wholly improper.
13

14
15
16
17 d) Equitable Factors Do Not Support an Injunction.

18
19 Finally, even if plaintiff were able to establish each of the Tyler Pipe elements,
20 he still cannot demonstrate that equitable factors support an injunction here. An
21 injunction will not issue "when the harm it will do to a defendant is disproportionate
22 to the damage caused a plaintiff by the action he asks be enjoined." Agronic Corp. of
23 Am. v. DeBough, 21 Wn. App. 459, 464 (1978).
24
25

26
27 Plaintiff cannot establish to any degree of certainty anything more than a
28 highly speculative (if not nonexistent) harm. Conversely, the premature declaration of
29 a hazard would cause Grace irreparable harm. See Churchill Village, 2000 U.S. Dist.
30 LEXIS 7505 at *30; Sandborn Mfg., 997 F.2d at 490. Even though ZAI is no longer
31 manufactured or sold, the consumer confusion that would result from the warning
32 sought by plaintiff would adversely affect Grace's sales of *other* insulation or
33 construction products. In addition, the issuance of an unfounded injunction would
34 irreparably harm defendants' reputation and good will. Further, a premature
35 declaration of a hazard before trial would irreparably impair the objectivity of
36
37
38
39
40
41
42
43
44
45
46
47

1 prospective jurors and prejudice defendants' rights in this litigation. These harms are
2 inherently incapable of compensation by monetary damages.
3

4 As discussed above, ZAI does not pose a hazard. If an injunction were
5 granted, and after trial or after full consideration by the numerous administrative
6 agencies addressing the issue it were determined that there is not a hazard to property
7 owners, the unfounded public concern that could be caused by such a warning could
8 not be effectively countered. Indeed, the court in Punnett I rejected an injunction to
9 require a warning under just these circumstances. 621 F.2d at 587-88 (injunction
10 denied where warning of radiation hazard could bring unnecessary public anxiety that
11 outweighed uncertain risk of mutagenic birth defects).
12
13
14
15
16
17
18
19

20 The potential for such harm has been recognized by governmental agencies
21 whose functions involve providing warnings. The EPA, for example, has experienced
22 problems with its early statements regarding asbestos in schools. Indeed, it has
23 concluded that changes in its messages on that subject as its scientific knowledge
24 developed have led to public confusion. Price Aff., p. 21. Similarly, the Chairman of
25 the CPSC has noted the drawbacks of "jumping to conclusions about an alleged risk,"
26 comparing the panic resulting from a premature warning to that arising from "shouting
27 fire in a crowded theater." Price Aff., pp. 21-22. As a result, the EPA and other
28 governmental agencies now apply principles derived from the scientific field of risk
29 communication, to ensure that necessary messages are properly targeted and crafted to
30 inform, rather than to alarm. Price Aff., pp. 21-22; Supplemental Price Affidavit
31 dated October 5, 2000 ("Supp. Price Aff.") (Ex. 6 to Oct. 6 Treppiedi Dec.).
32
33
34
35
36
37
38
39
40
41
42
43

44 Premature warning could foster unwarranted consumer concerns that would not
45 be in the public interest. The potential for such consumer worry—or even panic—is
46
47

1 particularly strong here, where plaintiff seeks the issuance of the warning under the
2 auspices of this Court. Such a warning might imply to consumers that there had been
3 a judicial finding of a hazard after full consideration of the merits. Here, as in
4 Punnett I, the existence of any hazard remains a contested issue, while the harm that
5 could be caused by an incorrect warning far exceeds the possibility of any alleged
6 harm caused by awaiting more definitive scientific findings.
7
8
9
10
11

12
13 **B. THIS COURT SHOULD DENY PLAINTIFF'S REQUEST FOR**
14 **INJUNCTIVE RELIEF BECAUSE THE SUBJECT MATTER OF**
15 **PLAINTIFF'S CLAIM IS PROPERLY COMMITTED TO THE**
16 **PRIMARY JURISDICTION OF GOVERNMENTAL AGENCIES**
17

18 Federal, state, and local administrative agencies are engaged in ongoing efforts
19 to address precisely the issue raised by plaintiff's motion. The hazard determination
20 plaintiff asks this Court to make, the drafting and distribution of the warnings, the
21 consumer information and safety instructions plaintiff asks this Court to fashion, and
22 the communication and response plans he has asked this Court to devise all fall
23 squarely within the expertise of the EPA and the other federal and state agencies that
24 have been and are studying ZAI. According to plaintiff's own hazard notification
25 expert, those agencies are actively considering a hazard notification and response plan
26 for ZAI. Accordingly, under the long-standing doctrine of primary jurisdiction, this
27 Court should defer to the expertise of those agencies. These agencies have extensive
28 experience in determining and addressing hazards related to asbestos and products
29 that contain asbestos, as well as considerable resources available both to study and to
30 take appropriate action. These agencies are better equipped to make the scientific
31 determinations necessary to answer the central question posed in this case: whether
32 ZAI presents a health hazard to occupants of buildings in which it has been installed.
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Agencies involved include the EPA, OSHA, the CPSC, and the local Washington state
2 air quality control authorities.
3

4 Where, as here, a lawsuit involves complex issues that are also under
5 consideration by an administrative agency with experience in the matter at hand,
6 courts often defer to agency expertise. See, e.g., United States v. Western Pac. R.R.
7 Co., 352 U.S. 59, 64 (1956) (describing doctrine of primary jurisdiction, one purpose
8 of which is to obtain the benefit of "the expert and specialized knowledge" of the
9 agency); Far East Conference v. United States, 342 U.S. 570, 574 (1952) (deference
10 to agency appropriate "in cases raising issues of fact not within the conventional
11 experience of judges"). Where a lawsuit involves complex issues that are also under
12 consideration by an administrative agency with experience in the matter at hand,
13 courts often defer to agency expertise. Washington courts have recognized the
14 doctrine of primary jurisdiction and have deferred to agency proceedings under such
15 circumstances. See Schmidt v. Old Union Stockyards Co., 58 Wn.2d 478, 484 (1961)
16 (primary jurisdiction applies where legal claim "requires the resolution of issues
17 which, under a regulatory scheme, have been placed within the special competence of
18 an administrative body") (quoting Western Pac., 352 U.S. at 64).

28
29
30
31
32
33

34 In a case similar to this one, the trial court deferred to an ongoing
35 administrative process engaged in determining the scope of an alleged hazard and the
36 need for a public information process based on its determinations. Punnett v. United
37 States, 602 F. Supp. 530 (E.D. Pa. 1984) ("Punnett II"). The trial court had previously
38 denied a preliminary injunction seeking a warning, which was upheld on appeal; on
39 remand, the trial court dismissed the action for plaintiff's failure to exhaust
40 administrative remedies. The court's decision was based on the pendency of
41
42
43
44
45
46
47

1 investigations that were being conducted by the Defense Nuclear Agency ("DNA").
2 The court noted that the DNA had undertaken "an extensive program developed to
3 research" the very hazard about which plaintiff had sought a warning. Id. at 532.
4 Furthermore, the agency was engaged in an ongoing effort to disseminate information,
5 and was "developing a record as to what should be contained in the warning plaintiffs
6 seek" through distribution of the results of its studies. Id. Thus, it was "distributing
7 facts, although it may not be distributing conclusions from these facts as plaintiffs
8 want." Id. Similarly, in this case, federal regulatory agencies (i.e., EPA, OSHA,
9 ATSDR and CPSC) are all evaluating the vermiculite issue and are disseminating
10 information and reports of their activities.⁸

11 In In re "Agent Orange" Prod. Liab. Litig., 475 F. Supp. 928, 932 (E.D.N.Y.
12 1979), the court granted a stay of litigation concerning plaintiff's request that
13 defendants' herbicide be banned, because the EPA was independently considering the

14

45
46
47
so.
⁸ Punnett II discusses a related case, Jaffee v. United States, 592 F.2d 712 (3d
Cir. 1979), which permitted military personnel subjected to nuclear tests to bring a
claim against the Army under the Administrative Procedures Act for failing to act
upon their request for a medical warning. Jaffee is not apposite here, however,
because it did not involve preliminary relief. Indeed, the very next year the Third
Circuit was directly faced with a request for preliminary relief seeking a warning
regarding the same alleged harm, and upheld its denial. Punnett I, supra.
Furthermore, Jaffee arose under the APA, *after* plaintiffs had unsuccessfully sought
relief from the appropriate agency; plaintiff in this case has not even attempted to do

1 need for a ban. Other courts have likewise applied the doctrine of primary jurisdiction
2 to matters involving the special expertise of the EPA. See, e.g., Kennecott Copper
3 Corp. v. Costle, 572 F.2d 1349 (9th Cir. 1978); Montgomery Envtl. Coalition Citizens
4 Coordinating Comm. v. Washington Suburban Sanitary Comm'n, 607 F.2d 378 (D.C.
5 Cir. 1979).
6
7
8
9

10 These cases demonstrate that where, as here, administrative expertise and
11 resources can and are being brought to bear upon an issue that is central to a litigation
12 proceeding, the court cannot—and should not—interfere with administrative agencies'
13 review. As set forth more fully in the affidavit of Dr. Bertram Price, the EPA and
14 CPSC are currently evaluating whether the very relief requested by plaintiff in this
15 case is appropriate. These agencies have been conducting extensive comprehensive
16 evaluations with respect to asbestos exposures, and have employed the expertise of
17 independent scientists and scientific research organizations to determine the
18 relationship between health risk and human exposure to asbestos. Price Aff., p. 2.
19 The agencies are better equipped not only to determine whether a hazard exists, but
20 also to determine whether a warning is warranted and, if so, to create and disseminate
21 an appropriate warning in a manner that can avoid unnecessary consumer confusion
22 and most effectively reach those in need of it. Price Aff. § 4.2; Supp. Price Aff. They
23 are already communicating frequently and in depth with the public concerning
24 potential exposure to asbestos in buildings and to vermiculite insulation with trace
25 amounts of asbestos in residences. Price Aff., p. 2; Brown Aff. ¶ 13.

36
37
38
39
40
41

42 Plaintiff's own medical expert, Dr. Henry A. Anderson, a purported expert on
43 risk communication, among other things, testified that it would be improper for his
44
45
46
47

1 state agency to issue a warning regarding vermiculite attic insulation without waiting
2 for a coordinated effort with federal authorities:
3

4
5 We've also learned over the years that for something like this a
6 single message, a unified message . . . is far more effective than a
7 single state or a single county or a single program taking action
8 on their own, where this is a long term issue, it's not a short term
9 issue . . .
10

11
12 Anderson Dep., pp. 126:21-127:2. While plaintiff contends that this Court should act
13 preliminarily to send out an immediate warning, Dr. Anderson believes it is
14 inappropriate for his state agency to take any such preliminary action. Indeed,
15 Dr. Anderson is awaiting the lead of federal agencies studying the issue:
16
17

18
19
20 For something that is a nationwide issue of which we [the state
21 agency] don't have the knowledge on the full extent of the
22 information or where it is or how people can know what the issue
23 is, we're dependent upon the federal government to generate that.
24
25

26 Anderson Dep., p. 130:1-9. Dr. Anderson is "confident that the information is being
27 generated" by the federal agencies. Id. According to Dr. Anderson, state brochures or
28 websites are "not sufficient to the get word out. That's why it has to be national.
29 That's why the lead and the announcements will come via ATSDR and EPA." See
30 Anderson Dep., pp. 142:24-143:3.
31
32

33
34
35 For more than 30 years, federal government agencies have been closely
36 involved in regulating, studying, and addressing potential hazards posed by asbestos-
37 containing products. This area is covered by a host of regulatory schemes, addressing
38 areas ranging from workplace safety to environmental protection to consumer
39 protection. A full description of the many federal agencies involved in this issue, their
40 historical activities, and their ongoing studies and actions is contained in the Price
41
42
43
44
45
46
47

1 Affidavit. Recent and ongoing activities of these agencies with respect to vermiculite
2 products in particular include the following:
3

- 4 ● Since 1977, CPSC has investigated the safety of asbestos-containing
5 products, and has the authority to ban any that it deems unsafe. CPSC
6 began investigating vermiculite insulation with trace amounts of asbestos in
7 the early 1980s. This study has not yielded grounds to ban, or even to
8 regulate, such products. Price Aff. § 2.3.
9
- 10 ● The EPA has also studied potential vermiculite exposure since the early
11 1980s. It has made a comprehensive effort to obtain data, including
12 contracting with several private scientific consultants. The EPA has also
13 been actively involved in exposure and risk assessment studies. In 1985, it
14 published an exposure assessment that concluded, with respect to exposure
15 from consumer installation of products like ZAI, that "[o]nce in place,
16 vermiculite attic insulation would probably not lead to subsequent
17 consumer exposure." Price Aff., p. 8.
18
- 19 ● The EPA conducted a health assessment for vermiculite in 1991. In
20 February 1999, it received a risk assessment report whose methodology
21 EPA is currently considering applying to potential household exposures.
22 Price Aff., pp. 8-9.
23
- 24 ● This year, the EPA conducted a study to assess consumer risk associated
25 with vermiculite in horticultural products, concluding that "the likelihood of
26 the asbestos becoming airborne, during routine use of these [horticultural]
27 products, indicated that this potential exposure poses a minimal health risk
28 to consumers." Price Aff., p. 9.
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

- 1 ● The EPA's web page includes a "Q&A regarding vermiculite attic
2 insulation," which concludes: "[D]ue to the physical characteristics of
3 vermiculite, there's a low potential the material is getting into the air. If the
4 insulation is not exposed to the home environment - for example, it's sealed
5 behind wallboards and floorboards or is isolated in the attic which is vented
6 outside - the best advice would be to leave it alone." (Ex. 17 to Oct. 6
7 Treppiedi Dec.)
8
9
- 10 ● The EPA is engaged in current and ongoing testing of the exposures to
11 homeowners from vermiculite attic insulation products and the appropriate
12 maintenance of those products. See EPA "Q&A Libby Asbestos Site, EPA
13 Region 8" (Ex. 19 to Oct. 6 Treppiedi Dec.).
14

15 In addition, numerous agencies with authority over this issue exist at the state
16 and local level. The Department of Labor and Industries has jurisdiction over and has
17 issued regulations governing workers who come into contact with asbestos products.
18 See, e.g., Chap. 49.26 RCW; WAC 296-62-077; WAC 296-65-001 et seq.
19 Washington has also enacted a statute governing indoor air quality in government
20 buildings, Chap. 70.162 RCW, which tasks the Department of Labor and Industries
21 with recommending policies and regulations to strengthen indoor air quality and to
22 provide educational and informational materials on the subject. The Department of
23 WISHA Services of the Department of Labor and Industries has issued a Regional
24 Directive on indoor air quality that addresses guidelines for evaluating indoor air
25 quality issues and workplace hazards. Finally, Washington's Clean Air Act, Chap.
26 70.94 RCW, establishes local air pollution control agencies that have authority to
27 conduct research into air pollution hazards and to collect and disseminate information
28
29

45
46
47

1 to the public. RCW 70.94.141. Local agencies, including the Spokane County Air
2 Pollution Control Authority ("SCAPCA"), acting under the authority granted by the
3 Clean Air Act, have enacted regulations governing asbestos. SCAPCA has expressly
4 stated its interest in issues posed by airborne asbestos and its impact on public health.
5
6 SCAPCA Reg. I, Art. IX.
7
8

9
10 These comprehensive efforts, by experienced agencies with jurisdiction over
11 the issue and significant experience in evaluating the potential for harm associated
12 with asbestos products, provide a more appropriate forum than is available in the
13 courts. In fact, according to plaintiff's own medical expert, a coordinated national
14 effort by these agencies is necessary to address the issue effectively. Anderson
15 Dep., p. 143:2-3. Indeed, according to plaintiff's counsel, the issues here pose
16 questions of "public health." Sept. 21 Trans., p. 24:1-5. Accordingly, they should be
17 resolved by agencies experienced in and responsible for public health, not by the
18 courts.
19

20
21
22
23
24
25
26
27
28
29 **C. PLAINTIFF'S REQUEST FOR NOTICE UNDER CIVIL**
30 **RULE 23(d)(2) SHOULD BE DENIED.**
31

32 Apparently recognizing the weakness of his arguments based on the
33 preliminary injunction standard, plaintiff tries to convert the procedural notice
34 available under CR 23(d)(2) into a basis for obtaining relief on the merits. The court
35 should reject plaintiff's creative, but unfounded, attempt to do so. CR 23(d)(2) is a
36 purely *procedural* rule that has not been, and cannot be, transformed into an
37 entitlement to substantive relief. The rule is intended to protect the procedural rights
38 of class members during the course of litigation, not to protect them from the conduct
39 that allegedly gave rise to it.
40
41
42
43
44
45
46
47

1 The general purpose of CR 23(d) is to provide a notice mechanism for classes
2 certified under provisions of CR 23 that do not automatically require a notice.
3
4 7B Charles Alan Wright et al., Federal Practice and Procedure ("Wright") §§ 1791,
5 1793, at 298 (West 1986). As stated by the Advisory Committee Note to the
6
7 corresponding (and identical) federal rule, subsection 23(d)(2) "is concerned with the
8
9 fair and efficient conduct of the action." It authorizes the court to provide notice to
10
11 absent class members of developments in the litigation (e.g., "various steps being
12
13 taken in the action and other matters"). Wright § 1791, at 286. The vast majority of
14
15 notices, therefore, are designed to ensure that class members are aware of their
16
17 procedural rights (such as the right to opt in or out), or to enhance the court's
18
19 management of class actions (such as to aid it in determining numerosity or to notify
20
21 class members of developments in the case). See, e.g., Dore v. Kinnear, 79 Wn.2d
22
23 755, 766-67 (1971) (cited by plaintiff) ("Manifestly, this notice is for the benefit of
24
25 the members of the class to allow them to object to their inclusion in the case or to be
26
27 bound by the judgment in the event their rights may in any way be adversely
28
29 affected.").⁹
30
31
32
33
34
35

36
37 ⁹ Class notice is generally issued only after certification. See Pan Am. World
38
39 Airways, Inc. v. United States Dist. Court, 523 F.2d 1073, 1079 (9th Cir. 1975).
40
41 Under the rare circumstances in which pre-certification notice is appropriate, the
42
43 purpose is to preserve the *procedural* rights of class members, not to address the
44
45 merits, and any notice must be carefully calibrated to avoid prejudicing a defendant.
46
47 Tylka v. Gerber Prods. Co., 182 F.R.D. 573, 579 (N.D. Ill. 1998).

1 Nothing in CR 23 or in the case law construing it permits a court to utilize a
2 notice as a remedy on the merits as plaintiff seeks to do here. Indeed, this is expressly
3 prohibited: there is "nothing in either the language or history of Rule 23 that gives a
4 court any authority to conduct a preliminary inquiry into the merits of a suit."
5
6
7

8 Eisen v. Carlisle & Jacquelin, 417 U.S. 156, 177 (1974). The Court continued:
9

10
11 Additionally, we might note that a preliminary determination of
12 the merits may result in substantial prejudice to a defendant,
13 since of necessity it is not accompanied by the traditional rules
14 and procedures applicable to civil trials. The court's tentative
15 findings, made in the absence of established safeguards, may
16 color the subsequent proceedings and place an unfair burden on
17 the defendant.
18
19

20 Id. at 178.
21

22 Plaintiff has materially distorted the meanings of cases in which notices have
23 issued under CR 23(d)(2). Notices involving purported misconduct by defendants in
24 class actions have generally issued in two types of situations: (1) where liability has
25 actually been determined and the class is notified of this result or (2) where defendant
26 has engaged in unauthorized contact with class members or some other procedural
27 violation. Not one case permits a pre-trial notice addressing the purported
28 "misconduct" upon which the underlying claims are premised. That is what must be
29 addressed at trial, and, as Eisen mandates, no procedural device may be utilized to
30 deprive a defendant of that fundamental right.
31
32
33
34
35
36
37
38
39

40 Each of the cases cited by plaintiff is consistent with this principle. In Nagy v.
41 Jostens, Inc., 91 F.R.D. 431, 432 (D. Minn. 1981), the court ordered corrective notice
42 after the defendant violated a court order prohibiting certain communications with
43 putative class members. The required notice served solely to protect the procedural
44
45
46
47

1 rights of class members and to remedy misconduct *during* the litigation, not the
2 conduct giving rise to the litigation. Similarly, both Kleiner v. First Nat'l Bank, 751
3 F.2d 1193 (11th Cir. 1985), and Weight Watchers of Philadelphia v. Weight Watchers
4 Int'l, 53 F.R.D. 647 (E.D.N.Y. 1971), supplemental op., 55 F.R.D. 50 (E.D.N.Y.
5 1971), required notices to remedy improper contact by defendants with class members
6 *during the litigation*. Both pertain to the court's power to manage the procedural
7 aspects of class actions; neither even remotely suggests that CR 23(d)(2) can be used
8 to provide substantive relief on plaintiff's underlying claims.¹⁰

9
10
11 Barahona-Gomez v. Reno, 167 F.3d 1228, 1236 (9th Cir. 1999), cited by
12 plaintiff, likewise fails to support his request for a warning on the merits. There, the
13 court granted a preliminary injunction prohibiting further deportation of certain
14 immigrants and certified a class of immigrants whose applications had been denied
15 under the law that was challenged in the litigation. The court did not utilize Fed. R.
16 Civ. P. 23(d)(2) as a substitute for a preliminary injunction as plaintiff seeks to do
17 here. Instead, it applied both Fed. R. Civ. P. 65 and Fed. R. Civ. P. 23 as they were
18 intended—the former to provide substantive prohibitory relief *pendente lite* and the
19 latter to provide notice of the litigation to the certified class. Further, the notice did
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37

38
39 ¹⁰ Plaintiff's final "authority" is an unpublished reporter's transcript of a trial
40 court hearing. To the extent this document provides any guidance at all, it merely
41 establishes the same principle as plaintiff's other cases—that courts may use
42 CR 23(d)(2) to address *procedural* violations, not to remedy past conduct giving rise
43 to the litigation.
44
45
46
47

1 not prejudice the merits (as plaintiff seeks in this case) by stating that the class
2 members' applications had actually been wrongly denied. That issue was left for trial.
3

4
5 In addition to seeking his substantive remedy on the merits in the guise of a
6 class notice, plaintiff also seeks to impose the cost on defendants, based solely on his
7 contention that plaintiff's alleged damage has been caused by defendants' purported
8 misconduct. Plaintiff's brief at 26, 29. Plaintiff's proposition represents yet another
9 attempted leap over the requirement of trial on the merits, and is directly contrary to
10 established class action law.
11

12
13 The Supreme Court has expressly rejected this notion. In Eisen, it held that the
14 lower court's cost-shifting order based on its finding of the moving party's probability
15 of success on the merits "contravene[d] the Rule" and improperly decided the merits.
16 417 U.S. at 177. Alleged wrongdoing underlying the merits of a claim is patently
17 insufficient to shift the cost of notice. Id.; see also Oppenheimer Fund, Inc. v.
18 Sanders, 437 U.S. 340, 363 (1978) ("A bare allegation of wrongdoing . . . is not a fair
19 reason for requiring a defendant to undertake financial burdens and risks to further a
20 plaintiff's case.").

21
22 **D. IF AN INJUNCTION IS ORDERED, A SUBSTANTIAL BOND**
23 **WOULD BE REQUIRED.**
24

25 Finally, this Court should reject plaintiff's request that it shift to Grace *all* the
26 costs of the requested injunction—including the damages if an injunction were issued
27 and later found to be improper—by waiving the bond requirement. Both CR 65 and
28 Washington's injunction statute, RCW 7.40.080, require a bond before an injunction
29 may be issued. CR 65(c) sets forth the rule in mandatory terms:
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 [N]o restraining order or preliminary injunction shall issue *except*
2 *upon the giving of security by the applicant*, in such sum as the
3 court deems proper, for the payment of such costs and damages
4 as may be incurred or suffered by any party who is found to have
5 been wrongfully enjoined or restrained.
6

7
8 (Emphasis added.) Similarly, Washington's statute sets forth the general rule as
9 follows:
10

11
12 No injunction or restraining order shall be granted until the party
13 asking it shall enter into a bond, in such a sum as shall be fixed
14 by the court or judge granting the order, . . . to the adverse party
15 affected thereby, conditioned to pay all damages and costs which
16 may accrue by reason of the injunction or restraining order. . . .
17
18

19 RCW 7.40.080.
20

21 Plaintiff has not cited a *single* Washington case to support his argument for
22 waiver of the bond. Indeed, Washington courts have consistently construed the bond
23 requirement quite strictly. Even an injunction that has actually been issued is invalid
24 if a bond is not filed. See, e.g., Irwin v. Estes, 77 Wn.2d 285, 286-87 (1969) (without
25 a bond, there is no valid injunction); Swiss Baco Skyline Logging Co. v. Haliewicz,
26 14 Wn. App. 343, 345 (1975) (bond is a condition to obtaining preliminary injunctive
27 relief).
28
29
30
31
32
33
34

35 In 1994, the Legislature enacted an amendment to the injunction statute that
36 permits waiver of the bond requirement "in situations in which a person's health or life
37 would be jeopardized." RCW 7.40.080. However, in the six years since this
38 amendment was enacted *no* reported Washington decision has applied this exception
39 to waive an injunction bond in its entirety, as plaintiff seeks here. In light of
40 Washington's long history of strictly applying the bond requirement, it is clear that
41 only the most exceptional circumstances could support a waiver. Such circumstances
42
43
44
45
46
47

1 have yet to be found by any Washington court, and certainly do not exist here—where
2 the evidence does not even support the existence of any health hazard.¹¹
3

4 Furthermore, defendants would be highly prejudiced if no bond, or a nominal
5 bond, were required. Grace would suffer substantial harm, in lost sales and in damage
6 to its reputation and good will by the improper issuance of an injunction. The
7 declaration of a hazard that plaintiff seeks would prejudice defendants on a material
8 issue for trial. In short, issuance of the injunction plaintiff seeks would irreparably
9 harm Grace.
10

11 Accordingly, it is important that plaintiff be required to post a very substantial
12 bond in an amount to be determined by this Court. As discussed above, the warning
13 plaintiff requests is likely to confuse the public. The manner of its delivery and its
14 lack of targeting would lead most consumers to recall few of its specifics, and to
15 confuse the particular product at issue with other insulation products. The most likely
16

17
18
19
20
21
22
23
24
25
26
27
28
29 ¹¹ Even under the more lenient federal standard upon which plaintiff attempts
30 to rely, waiver would be inappropriate. Federal judges have discretion to waive an
31 injunction bond, but have generally done so only where plaintiff "would effectively
32 [be] den[ied] access to judicial review." California ex rel. Van de Kamp v. Tahoe
33 Reg'l Planning Agency, 766 F.2d 1319, 1325 (9th Cir.), amended, 775 F.2d 998 (9th
34 Cir. 1985). Such circumstances have been found only in exigent circumstances, such
35 as in public interest litigation or where the plaintiff is indigent. This case, in contrast,
36 is a private suit for damages brought by a successful landlord who is represented by
37 six different law firms. Plaintiff can hardly be said to be "denied access to judicial
38 review" and he has not even attempted to claim indigency.
39
40
41
42
43
44
45
46
47

1 outcome would be a generalized unease with Grace's products overall, and lost sales
2 on insulation or other building products that contain no vermiculite or asbestos
3 materials. If the court grants plaintiff's request, Grace would also incur substantial
4 costs in disseminating the requested notice and handling the consumer questions that
5 will inevitably arise from it. In addition, Grace's reputation and good will would be
6 irreparably harmed.
7
8
9
10
11

12 IV. CONCLUSION

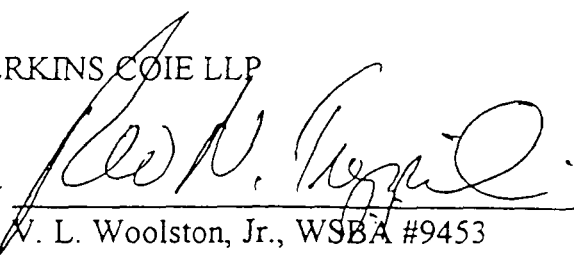

13
14 Plaintiff cannot meet the heavy burden required to obtain the mandatory
15 injunction he seeks. No emergency exists. The requested injunction is unprecedented
16 and improperly asks this Court to prejudge the core issue on the merits of this case.
17 Plaintiff's two legal theories suffer from fundamental weaknesses, and plaintiff cannot
18 establish the scientific facts he must prove in order to prevail. Furthermore, no harm
19 would attend denial of an injunction, because this very issue has already received
20 widespread publicity in the print and electronic media and is currently being
21 addressed by several different governmental agencies with considerable experience
22 and expertise in potential asbestos hazards. Finally, the premature and conclusory
23 warning sought here would be harmful to the public interest by engendering consumer
24 confusion. The public interest, as well as plaintiff's concerns, is better served by
25 permitting the numerous state and federal agencies currently studying this issue to
26 make determinations, based on broader experience and scientific resources that are not
27 available to this Court, regarding whether a hazard exists and, if so, whether and in
28 what form the public should be warned.
